

## **Psychology or Medical Student Wanted for Thesis or Internship**

In the NEVIA Lab, we study communication and social interactions in clinical and non-clinical populations. If you take this position, you will be part of an ongoing project where we are establishing the theatrical Mirror Game paradigm and mobile eye tracking to capture nonverbal coordination in non-autistic participants. We hope to gain insights into coordination in both nonverbal and verbal interactions in order to investigate these processes in an autistic population in a later project.

<https://nevia-lab.com/>

### **Responsibilities**

- Participant recruitment
- Data collection
- Data preprocessing

### **Research Questions**

- How can we assess interpersonal synchrony in verbal and non-verbal interactions?
- How viable is the Mirror Game paradigm to investigate coordination?
- How can we use mobile eye tracking to assess interpersonal coordination?

All these research questions can be used to develop a research project that fits a Bachelor or a Master thesis. If none of these speak to you but you find the project interesting, rest assured that your own ideas would also be very welcome!

### **Language Requirements**

Proficiency in English is required. Knowing German would be helpful.

### **When?**

Start date: immediately (October at the latest)
